

## Residency Logging Display System

Residency Logging Display system is central occupancy manager software which is capable of tracking room states across any facility. The system is fully customizable to any number of pre-defined occupancy states which is controlled by Check In/Check Out feature. A typical example of RLDS is how it serves as an In-patient manager tracking room states as well as doctors. The backend has been tailored to fit into a Content Management system environment which includes an additional management interface for the room manager.

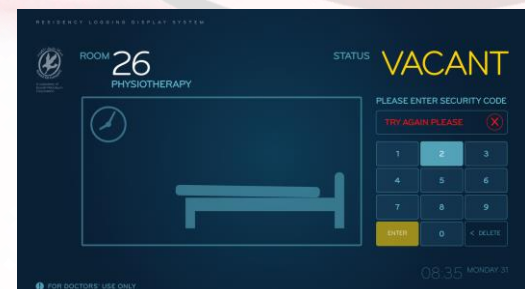

### Key features

- Use of Special Touch Screens & KIOSK Stations.
- Displaying Graphically Enhanced Information.
- Creation of Flash based Occupancy States.
- Tracks states of the rooms.
- Standard reporting features.
- Name based Listings.
- Allows multiple Check In features.
- Includes a janitor Check In feature to monitor the room health status.
- User friendly back end manager and room administration interface.

### How it works

Every room administrator/janitor prior to entry/exit will key in their unique security code. Correspondingly the room status shifts between states. The status of all the rooms can be centrally viewed by the departmental head from a single location/multiple location across the facility. There are four basic room states which are completely customizable according to the operational flow of the facility. The basic four states include, "Ready", "Occupied", "Attending" and "Vacant".

ROOM **26**  
PHYSIOTHERAPY

STATUS **ATTENDING**
